

Product Specification Document

Product Name

Developer Portfolio Website

Product Overview

This project is a personal developer portfolio website designed to showcase the developer's skills, projects, and contact information. Visitors can explore the developer's work and contact them through a contact form.

Purpose

- Present the developer's skills and technologies
- Showcase projects and previous work
- Allow potential clients or employers to contact the developer

Target Users

- Recruiters
- Potential clients
- Other developers
- Anyone interested in the developer's work

Core Features - Portfolio Section

- Display developer name and introduction
- Show skills and technologies
- Showcase projects with descriptions
- Provide links to GitHub repositories or live demos
- Allow users to navigate between sections easily

Core Features - Contact Us Page

- Contact form containing Name, Email, and Message fields
- Name field is required
- Email field is required and must be a valid email format
- Message field is required

Expected Behavior

- Validate required fields before submission
- Reject invalid email formats
- Prevent empty form submissions
- Display a success message after sending a message
- Display an error message if submission fails

Testing Scope for TestSprite

- Verify contact form UI is visible
- Verify all input fields are present
- Verify submit button works
- Test validation for empty fields
- Test validation for incorrect email formats
- Verify error messages appear correctly
- Verify successful submission with valid inputs
